

Project Title

MedAssist AI – Medical Symptom Analysis and Disease Prediction System

Submitted By : Mohammad Aleem Qurammi

Role:

Frontend Development – UI Design and Implementation of the MedAssist AI Web Platform

1. Introduction

The MedAssist AI frontend is the user-facing web platform through which patients interact with the AI-powered symptom checker and disease prediction system. This milestone focused on designing and building the core landing page, covering the visual layout, section structure, and content flow that introduces users to the platform's features and guides them toward using the AI Assistant.

2. Work Completed

2.1 Hero Section

The Hero Section is the first section visible on the homepage. It introduces the platform with a bold headline, a short sub-headline describing the value proposition, and two primary call-to-action buttons (“Start Analysis” and “Watch Demo”). A live preview card on the right displays a sample AI analysis result, including health score, predicted condition, confidence percentage, and risk level, to visually demonstrate the platform's core capability.

2.2 Features Section

The Features Section presents the platform's core capabilities in a six-card grid layout. Each card uses an icon, a title, and a short description covering: Symptom Checker, Disease Prediction, Risk Assessment, Health Reports, AI Recommendations, and Medical History.

2.3 How It Works Section

The How It Works Section explains the user journey in four numbered steps — Choose Symptoms, AI Analysis, Disease Prediction, and Generate Report — connected in a horizontal timeline. Directly below it, a Stats Section highlights platform credibility with key figures: 100K+ Patients, 500K+ Predictions, 98% Accuracy, and 24/7 Availability.

2.4 FAQ and Footer Section

The FAQ Section uses an accordion-style layout listing common questions such as data security, sharing reports with doctors, how the symptom checker works, and pricing. The Footer contains the brand summary, quick links organized under Company, Products, and Resources, social media icons, and a newsletter subscription field.

3. Challenges Faced

- Maintaining visual consistency across sections while using a dark, glassmorphic theme with layered background effects.
- Structuring the four-step “How It Works” timeline and the six-card feature grid to stay clean and readable on different screen sizes.
- Aligning the floating stat cards (Health Score, Risk Level, AI Analysis) precisely over the hero background without overlapping the navigation bar.

4. Current Status

- Hero Section – completed
- Features Section – completed
- How It Works Section – completed
- Stats Section – completed
- FAQ Section – completed
- Footer Section – completed
- Testimonials Section – in progress

5. Next Milestone Plan

- Complete the Testimonials Section with review cards and user avatars.
- Build the AI Assistant chat interface for the symptom-checking flow.
- Connect the frontend to the Node.js backend for live symptom search.
- Integrate the trained machine learning model results into the analysis preview cards.
- Conduct responsive testing across mobile, tablet, and desktop breakpoints.

6. Conclusion

During this milestone, the core structure of the MedAssist AI landing page was designed and implemented, covering the Hero, Features, How It Works, Stats, and FAQ sections along with the footer. The layout establishes a consistent dark, glassmorphic visual identity for the platform and sets the foundation for integrating the AI Assistant and backend functionality in the next phase of the project.
